Title : Exercise 3 - List Comprehension & Lambda

Name: Justin Chong Mun Chen

IC Number: 960327-07-5097

Date : 21/6/2023

Introduction : To get familiarized with list comprehension and lambda function as well as map() and filter() methods that work with lambda function.

Conclusion : I now know a lot more about the distinction between using list comprehension and lambda function.

EXERCISE 3

List Comprehension & Lambda Exercise

In [6]:
```
# write list comprehension to determine the length of each word
# except 'the' and store as 'word_lengths'
sentence = "the quick brown fox jumps over the lazy dog"

word_lengths = [len(word) for word in sentence.split() if word != 'the']

print(word_lengths)
```

```
[5, 5, 3, 5, 4, 4, 3]
```

In [7]:
```
# write a list comprehension to extract the
# negative numbers from the list as integers and store as newlist
numbers = [34.6, -203.4, 44.9, -68.3, -12.2, 44.6, 12.7]

newList = [integer for integer in numbers if integer < 0]

print(newList)
```

```
[-203.4, -68.3, -12.2]
```

In [8]:
```
# Convert the following code to list comprehension

coords = []
for x in range(4):
    for y in range(2):
        coordinate = (x, y)
        coords.append(coordinate)
print(coords)

newCoords = [(x, y) for x in range(4) for y in range(2)]

print(newCoords)
```

```
[(0, 0), (0, 1), (1, 0), (1, 1), (2, 0), (2, 1), (3, 0), (3, 1)]
[(0, 0), (0, 1), (1, 0), (1, 1), (2, 0), (2, 1), (3, 0), (3, 1)]
```

In [9]:
```
# write a list comprehension to list all the combinations
# for the two sets of words

set1 = ['ball','cheese','round']
set2 = ['cake','rice','ham']

combination = [(word1, word2) for word1 in set1 for word2 in set2]

print(combination)
```

```
[('ball', 'cake'), ('ball', 'rice'), ('ball', 'ham'), ('cheese', 'cake'),
('cheese', 'rice'), ('cheese', 'ham'), ('round', 'cake'), ('round', 'ric
e'), ('round', 'ham')]
```

In [10]:
```
# write a lambda function that squares the number
# for all odd numbers from 1 to 100
x = range(1,101)

oddSquares = list(map(lambda number : number ** 2, filter(lambda integer :

print(oddSquares)
```

```
[1, 9, 25, 49, 81, 121, 169, 225, 289, 361, 441, 529, 625, 729, 841, 961,
1089, 1225, 1369, 1521, 1681, 1849, 2025, 2209, 2401, 2601, 2809, 3025, 3
249, 3481, 3721, 3969, 4225, 4489, 4761, 5041, 5329, 5625, 5929, 6241, 65
61, 6889, 7225, 7569, 7921, 8281, 8649, 9025, 9409, 9801]
```

In [11]:
```
# write a list comprehension that squares number
# for all odd numbers from 1 to 100
x = range(1,101)

oddSquares = [number ** 2 for number in x if number % 2 != 0]

print(oddSquares)
```

```
[1, 9, 25, 49, 81, 121, 169, 225, 289, 361, 441, 529, 625, 729, 841, 961,
1089, 1225, 1369, 1521, 1681, 1849, 2025, 2209, 2401, 2601, 2809, 3025, 3
249, 3481, 3721, 3969, 4225, 4489, 4761, 5041, 5329, 5625, 5929, 6241, 65
61, 6889, 7225, 7569, 7921, 8281, 8649, 9025, 9409, 9801]
```

In [17]:
```
# write a lambda function to extract names that begin with 'A'
names = ['Anne', 'Amy', 'Bob', 'David', 'Carrie', 'Barbara', 'Zach']

bNames = list(map(lambda name : name, filter(lambda name : name[0] == 'A',

print(bNames)
```

```
['Anne', 'Amy']
```

In [18]:
```
# write a list comprehension to extract names that begin with 'B'
names = ['Anne', 'Amy', 'Bob', 'David', 'Carrie', 'Barbara', 'Zach']

bNames = [name for name in names if name[0] == 'B']

print(bNames)
```

```
['Bob', 'Barbara']
```
